

MARVEL UNITED CROSSOVER CAMPAIGN MAP

Rules // Version 0.91 // Designed by Dom2D

Goal

Make your way through the campaign map, unlocking heroes to add to your roster, defeating villains and collecting rewards. Collect items to open gates and continue moving along more paths. Try to defeat all the villains, collecting as many Victory Points as possible before you run out of heroes!

- Reach for the Infinity Gauntlet and the M'Kraan crystals to tackle the biggest threats and the most points!

Set-up

Print out the map or display it in an image editor on a digital device. You'll need to be able to circle and check off things you've unlocked, villains you've defeated and heroes you've unlocked or lost.

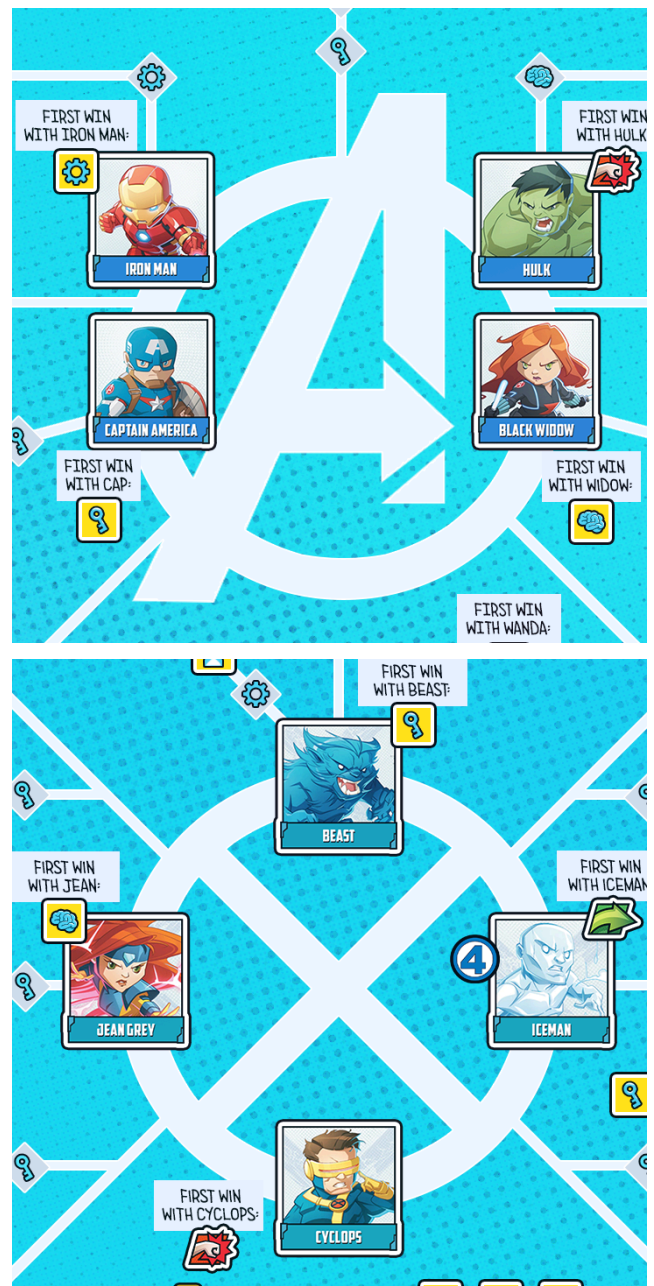

Pick a starting point: Pick one of the two starting points on the map - the Avengers' big "A" or the X-Men's big "X". The logos are part of the white path that you'll follow to explore the map!

Enjoy! ✨

If you like this please consider donating to me here so I can do more of these things in the future! <https://ko-fi.com/dom2d>

This map was designed for the full All-In Kickstarter pledges for both games, but feel free to skip over content you don't have access to.

If you do not own the necessary components to battle some villains or unlock some heroes, cross them off and continue moving along paths. Skip items and rewards that are only connected to this villain and nothing else, except for special items. For skipped villains, also cross off their point value, as you will only count points for defeated villains. Aim for the highest possible score with what you own!

Gameplay

From your starting point, follow the white path in any direction. You will encounter Heroes, Villains, items and gates, as well as other rewards and special elements. When you encounter these elements, read the following sections!

- The **accessible path** is anything you can move to without being blocked by villains and gates.
- You can move back and forth on the path! Keep exploring different directions to unlock the heroes you want and the items you need!
- The X-Men and Avengers logos are part of the path!

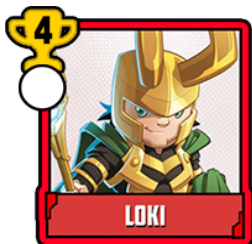

Heroes:

Heroes are characters with a white outline. When you encounter a Hero on the path, circle their icon to show they are now unlocked and part of your **roster**. When setting up a battle, you may pick any hero from your roster of all circled heroes on all paths that aren't blocked by Villains or Gates.

Heroes will be **removed** if they lose a battle, so be careful! If you run out of heroes, it's game over (see **Game End** section)!

- Heroes do **not** block the path.,

Villains:

Villains are characters with a red outline and a point value in a trophy. Villains block your path until they are defeated. You may start a battle with

any undefeated Villain on the accessible path (see the **Battle** section).

When a Villain is defeated, cross it off - it doesn't block the path anymore! Defeating villains is the main way to unlock more of the map, but also to get victory points (see the **Game End** section).

- Undefeated villains block the path.
- Crossed off villains do **not** block the path.

Items:

If you encounter an Item (an outlined **yellow square** containing blue icons), circle that square to show you have obtained it. Circled Items are now available for you to spend, to unlock **Item Gates**.

- Items do not block the path.

Item gates:

Grey diamond shapes containing blue icons are Item Gates. An Item gate blocks the path until you spend the item it displays.

Unlocking gates: Cross off a circled **Item** on the map, then unlock an Item gate (with the same icon type) by crossing it off as well. Paths from a crossed off Item gate are now accessible!

- Item gates block the path.
- Crossed off (unlocked) Item gates do **not** block the path.
- There are many different types of items, and some are pretty rare! Keep a look out for the items you want for the gates you want to open!

Bonus Tokens:

When you encounter an action token icon (Move, Attack, Heroic or Wild) on the path, circle them to show you've obtained them. It is now available to spend: **before a battle**, cross off any circled Bonus Token to add it to your pool of tokens for that battle. Distribute Bonus Tokens among your heroes as you see fit.

- Bonus tokens **never** block the path.
- Bonus Tokens not spent during a battle **are discarded**.
- Bonus tokens are rare! Spend them wisely on difficult battles!

Special Elements:

If you encounter something strange, look them up in the Special Rules section!

Battle:

Pick heroes from your roster, then play a normal cooperative game of Marvel/X-Men United with any number of players.

- Remember: decide if you use accessible Bonus Tokens *before* a battle.
- Pick a fair set of locations for every battle. Change it up often, or randomize them if you'd like! Do not use Hazardous locations (X-Force Expansion) unless a challenge forces you to.
- Some villains have special rules or challenges attached to them. Look them up in the special battles section!
- I highly recommend playing **with** Single and Double Wilds in heroes' decks. Some villains will have special challenges that might remove them or raise the difficulty in other ways (see Special Rules section).

If you **win** the battle, cross off that villain icon on the map.

- That icon does not block the path anymore, so any paths behind it are now accessible to you.
- The number in the trophy icon attached to the villain is the number of Victory Points you'll count when the campaign is over.
- You cannot battle that villain at that icon anymore, but some villains will return in a more

difficult form elsewhere on the map for you to fight again!

If you **lose** the battle, cross off the icon of all heroes involved in the battle. You may not use these heroes anymore! You may attempt the battle again, or move on to other things on the accessible path!

After the battle is over, move along the path to unlock more rewards and pick your next villain to fight!

Game End:

Defeat: If you don't have enough heroes in your roster (circled heroes who are not crossed off) to play a battle, it's game over! The campaign is finished, so you can now count your score: tally up the Victory Point value of all villains you have crossed off. The total is your final score!

Ultimate Victory: If you have defeated ALL Villain icons on the map, congratulations! You've achieved the ultimate victory! Count your perfect score: tally up the Victory Point value of all villains you have crossed off. The total is your final score!

Special Rules:

When you encounter a special element, read the additional rules in this section! **No need to read all of it now!** Just read as you go along on the map!

Special Rewards:

"Recover a removed hero": Cross this box to return a crossed off hero of your choice to your roster.

Danger room: When you gain access to a Danger Room box, circle it. During setup on any battle, cross off a circled Danger Room box to add the Danger Room to your starting location. Use the rules for Danger Room from the First Class rulebook.

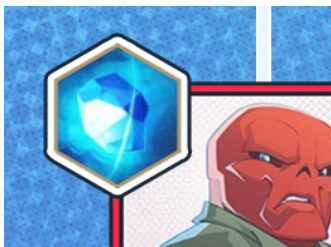

"Both unlocked" : When the two heroes are unlocked, circle the reward in this box. You may spend it later by crossing it off.

"First win with..." : The first time you win a battle while using this hero, circle the reward in this box. You may spend it later by crossing it off.

M'Kraan Crystals : When you gain access to a Crystal, circle it to show you have obtained it. You will need 5 Crystals to unlock the special gate to the Phoenix Five.

Infinity Gems : When you defeat a villain to which infinity Stones is attached, circle it to note you have obtained it! You will need all 6 Stones to unlock the special gates on the path to Thanos.

Fantastic Four icons: Some heroes on the map have a Fantastic Four icon attached to show they are temporary members of the Fantastic Four. This gives them a special ability when they're on a team with the classic Fantastic Four: in battle, when a hero with a 4 icon play their single Wild card, they may also perform bonus actions of the same type of all action tokens on the Fantastic Four card (as if they had played a

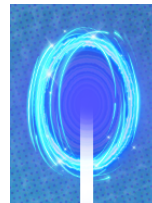

Teamwork card following rules in the Fantastic Four expansion).

Special Gates:

"Remove a Hero from your roster" :

Cross off an available hero to cross this box and keep following this path.

- This blocks the path like a gate.

Portal: From a portal, you may follow the path from the other portal on the map.

Special Battles:

Chains: When you encounter a hero chained to a villain, you may use that chained hero **in that battle only** as if it was part of your roster. Once the chained villain is defeated, cross it off as usual, then circle the hero to unlock it as usual - the hero is now part of your **roster**.

Deadpool: Follow the **Deadpool Villain** rules in the *Deadpool* expansion for this battle. The first time you end this battle, check your score: receive *all* rewards that have a lower number than your score.

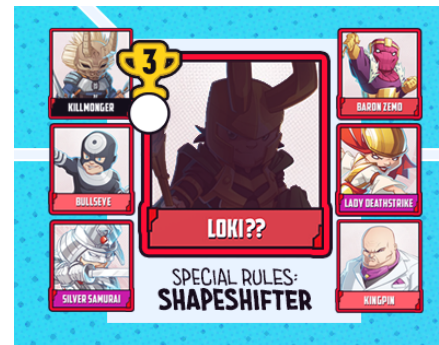

- Cross off Deadpool only when *all* rewards have been obtained.
- You do not need to cross off dead heroes from losing to Deadpool, **but** if you finish a battle with Deadpool without unlocking any new rewards, cross off one hero that was eliminated in that battle. Dangerous!

Phoenix Five: Follow the Campaign rules in the *Phoenix Five* expansion to fight these villains.

Infinity Gauntlet: Follow the full rules in the *Infinity Gauntlet* expansion, fighting the 3 infinity battles then Thanos.

Sinister Six: Follow the rules in the *Sinister Six* expansion to fight these villains all at once.

Horsemen of the Apocalypse: Follow the rules in the *Apocalypse* expansion, playing the Prelude against the horsemen, then the final battle against Apocalypse.

Shapeshifter: Pick randomly between the 6 villains shown around the villain on the map and fight that villain.

Start battle with...: During setup for this battle, receive the specified tokens and distribute them among your heroes.

Challenge: Some advanced villains force a specific challenge. Simply play following the special rules from that challenge's rulebook.

Note: If you don't own the necessary components for that challenge, pick another challenge in this list, going to the nearest ones to have a similar level of difficulty:

- Use 1 random Hazardous Location
- Takeover
- Endangered Locations (Black Panther)
- Sentinel 1
- Use 2 random Hazardous Locations
- Remove single Wilds
- Secret Identity
- Use 3 random Hazardous Locations
- Sentinel 2
- Plan B
- Sentinel 3
- Brutal Takeover
- Remove double Wilds

Random challenge: Pick randomly from the following six challenges (roll a six-sided die)

- 1) Secret Identity
- 2) Sentinel 1
- 3) Takeover
- 4) Endangered Locations (Black Panther)
- 5) Plan B
- 6) Remove single Wilds from all heroes' decks

Special Thanks:

- Everyone who played the first Ultimate Campaign map for their feedback!
- @Spiffworld for their Character Picker documents on BoardGameGeek
- Andrea Chiarvesio, Eric Lang and CMON for making such an awesome game!
